

INNOVATION AND PERFORMANCE, NATURALLY

- 100% natural
- More efficient absorption
- Superior and more durable antioxidant activity
- May replace synthetic vitamin E on a 1:1 ratio

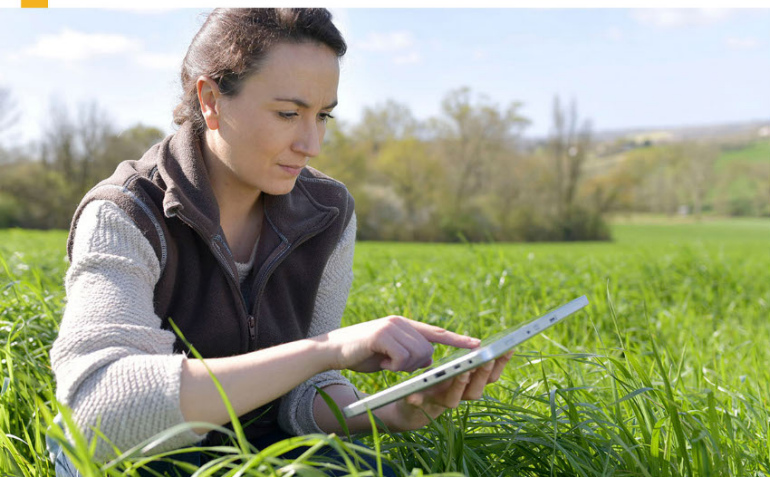

Herbal E®

A Swiss Company 

nuproxa.
efficient solutions, naturally

Herbal E®

 Herbal E® provides Vitamin E in the form idealized by nature, to be used most efficiently by animals, with similar or superior results to those of the synthetic vitamin E.

 **May replace synthetic vitamin E on a 1 : 1 ratio**

 **Superior and more durable antioxidant activity**

 **100% natural**

 **More efficient absorption**

Vitamin E is known as a potent antioxidant, essential for the maintenance and integrity of cell membranes, being effective to manage oxidative stress conditions. Nevertheless, vitamin E cannot act alone, requiring recycling by other antioxidants, such as vitamin C, glutathione, superoxide dismutase, among others, for its full functioning.

Herbal E® contains not only α -tocopherol, but all the forms of vitamin E (tocopherols and tocotrienols) and phenylpropanoids, which act synergistically and result in a greater and more durable biological antioxidant activity. The different forms of vitamin E present in Herbal E® are complexed with phospholipids which provide stability and better absorption.
