

iNuxA-PG®

**Is a growth enhancer
which reduces
production costs**

Advantages

Improves growth performance
between 3 and 5%

Shorter
production cycle

Reduces
production costs

efficient solutions, naturally

iNuxA-PG®

**Efficiency and performance
for aquaculture production**

Benefits

In fish farming it is difficult to reach the genetic performance potential in terms of growth and feed conversion efficiency (FCE). Higher growth is reflected either in higher weight at harvest or in shorter production cycles. A shorter production cycle, especially in sea farms, reduces production costs by lowering disease losses with the inability to use antimicrobial products.

iNuxA-PG® contains a proprietary blend of natural ingredients that work synergistically to improve feed intake, nutrient digestion, absorption and metabolism to improve fish performance. **iNuxA-PG®** improves growth rates between 3 and 5%.

Mode of action

iNuxA-PG® improves feed intake and increases nutrient digestibility, inducing a beneficial effect on fish performance.
