

NuxaFen®

High concentration of polyphenols with natural antioxidant action

Advantages

Concentrated source of polyphenols (>80%)

Improves pigmentation

100% natural

Improve sanitary status during stress periods

Contributes to reducing oxidative stress

Improves meat quality

Replaces 50% of the synthetic vitamin E added to the feed

NuxaFen®

Superior action against oxidative stress and to improve meat quality

Benefits

In fish and shrimp diets it is common to use antioxidant compounds for functional purposes, for example to reduce oxidative stress, improve the immune response or increase the quality of the final product (physical and chemical characteristics of the fillet). Additionally, fish have a high minimum requirement of vitamin E (VE) 50 to 200 g/ton of feed.

NuxaFen® is a highly concentrated source of polyphenols (>80%), recognized for their natural antioxidant action. The product is used to reduce oxidative stress, improving health status during periods of stress. In addition, **NuxaFen®** can replace 50% of the synthetic vitamin E added to the feed. The product improves pigmentation and meat quality when applied on-top.

Mode of action

The polyphenols present in **NuxaFen®** are varied and act synergistically to induce a complementary antioxidant effect in the organism.
